PDA's Change The Game

Introducing the latest model Personal Detention Assistant (PDA) from Black Creek. Each hand-held device provides officers with an unlimited range of control while offering wireless touchscreen functionality. According to Ike Newton, President of Black Creek, *"The Personal Detention Assistant is going to be a real game-changer for correctional staff. The amount of information that is available with the use of the PDA provides a level of security and data collection that has never before been fully available in a corrections environment."*

Detention personnel not only control and monitor doors and cameras, but can initiate watch tours, track inmate movement, dispense medications, and document day-to-day operations, all with a single device. The Personal Detention Assistant puts full security control and data-gathering technology directly into the palm of the officer.

Bosch® Security Cameras Added to Black Creek Menu

Black Creek has added integration with the Bosch® line of CCTV cameras to its repertoire of surveillance devices. The Bosch® devices render high resolution images and are integrated fully with Black Creek's digital recording system to provide superior video records management to correctional facilities.

Green Oak/Woodland Re-ups with Black Creek's TSI PRISM RFID Technology

Black Creek is proud to announce that its TSI PRISM RFID Technology Division has been awarded a contract by Lansing, Michigan-based Superior Electric Co. for system hardware, software and installation consultation at the new Green Oak and Woodland Correctional Centers of Whitmore Lake, Michigan. TSI PRISM radio frequency identification technology was first installed at the Woodland Center (formerly W.J. Maxey Boys Training School) in 2002 and will be installed at the sites of new construction to aid in fulfilling Michigan's Department of Corrections statewide goal of creating a safer Michigan through effective offender management and supervision in its facilities and communities while holding offenders accountable and promoting their success.

Web-based Video Visitation Systems Provide Safety, Revenue

With tight budgets, correctional agencies are investing in web-based Video Visitation Systems to reduce costs, enhance security and even generate revenue. Available plans allow for Owner, or Black, Creek, hosted visits to meet the financial and bandwidth needs of the correctional agency. Black Creek's software automatically checks both hardware and software to ensure a high-quality visit and automatically connects the visit when optimum system parameters are met. Each facility can easily configure visiting locations, durations, availability parameters and more.

IP Web Visitor can be integrated into a facility's JMS thus allowing visits to be scheduled, along with a confirming time & date E-mail message to the visitor, all without facility staff involvement. Each agency registers users and assigns individual user names and passwords for system access. IP Web Visitor also allows for report generation of scheduled visits by time and date ranges. As determined by facility operations, both professional and/or public visits can be facilitated with separate billing structures including automated credit card charging.

Black Creek Welcomes New Employees

(LEFT) LOOK FAMILIAR? LEAH WATKINS POSES FOR A RECENT PHOTOSHOOT FEATURING TSI PRISM TECHNOLOGY. YOU CAN CHECK OUT THE AD IN THE LATEST ISSUES OF *AMERICAN JAILS*, *CORRECTIONS TODAY*, *CORRECTIONS FORUM* AND *CORRECTION TECHNOLOGY*.

Black Creek is very pleased to announce the most recent additions to the team:
