

# AI INTEGRATED REAL-TIME VIDEO INTELLIGENCE

**Alert View**

**Output**

**Alert Detected**

**Type:** Aggression  
**Frame:** #88  
**Confidence:** 76%

**Confirmation Stages:**

- Stage 1 : 61%
- Stage 2 : 90%
- Stage 3 : Confirmed

**Description:**

This video potentially depicts an aggressive interaction between two individuals in a correctional facility. One person, wearing a striped uniform and red shoes, appears to be pushing or shoving another individual who is also dressed in a similar uniform. The pushed person seems to be resisting the push. Nearby, other inmates are seated at tables, some observing the situation while others appear engaged in their own activities.

**Alert: Aggression**  
**Stage 1 Confidence: 61%**  
**Stage 2 Confidence: 90%**  
**Stage 3: IrisVLM Confirmed**

## On-premises operation

Meets correctional security requirements without reliance on cloud connectivity

## Integration with existing cameras

No disruption to your current video system

## Reduced monitoring burden

Shift staff from passive video monitoring to proactive incident response

## Bridge the gap between policy expectations and staffing realities.

Video monitoring systems traditionally function as passive recording devices, requiring personnel to identify issues in real-time while monitoring multiple feeds. The implementation of a video intelligence system fundamentally transforms the role of cameras into proactive contributors to facility safety.

**Black Creek's Real-Time Video Intelligence** operates on premises and integrates seamlessly with existing cameras and the video environment that the command staff already trusts. There is no need to dismantle your current systems or reconstruct your control room. You can deploy the system selectively on the cameras where risk and liability are highest and expand over time.

# Black Creek's *Real-Time Video Intelligence*, powered by VisionCoreAI delivers:

- **Continuous 24/7 monitoring across all enabled cameras**, at the same speed as the live video stream without fatigue, distraction, or staffing impact
- **Autonomous identification of incidents in real-time** such as fights, assaults, falls, weapons, fires, and other developing situations as they occur, not after personnel notice or hear a radio call
- **Context-aware analysis** that understands behavior and intent rather than relying on simple motion or pixel changes

- **Optimization of your existing workforce** by enabling officers to focus on managing exceptions instead of monitoring multiple video feeds
- **Real-time artificial intelligence video analysis and notifications**, allowing staff to make informed decisions based on alerts
- **Generated time-stamped video footage and alert data that are automatically preserved and archived**, reducing search and review time, supporting investigations and legal defense, and optimizing storage efficiency
- **Instant notifications delivered** with camera location, event type, confidence level, and a natural-language description of what is happening
