

# Personal Detention Assistant©

Fully Integrated Solutions

# One Device. Facility-Wide Security Control.

Mobilize your touchscreen security control with a Black Creek **Personal Detention Assistant® (PDA)**. The hand-held device provides officers with an unlimited range of control while offering full wireless touchscreen functionality.

Black Creek's **PDA®** is designed to allow the direct supervision dayroom officer, rover or shift supervisor to perform common security control and documentation functions from any location in the dayroom or facility, all in a wireless fashion.

## LOCKING CONTROL

Status monitoring and control of doors within scope of control of device. Individual cell door icons include names of inmates currently housed in cells. (Interface with customer inmate management system required.) Swing or slider doors may be unlocked by double touching of a door icon corresponding to controlled door or a single touch to select the door and then touching the Enter Icon.

## INTERCOM CONTROL

Allows wireless, VOIP two-way communication with facility intercom stations within scope of control of device. Cell intercom stations indicate names of inmates currently housed in cells. (Interface with customer inmate management system required.) Double touching of icon corresponding to intercom station or single touch to select the station and then touching the Enter Icon initiates two-way communication with station selected. Double touching of same icon will disconnect station. Double touching of another icon disconnects current station and connects to new station selected.

## CCTV CAMERA CONTROL

Full motion, real-time display of CCTV cameras within scope of control of device.

## INMATE DATA DISPLAY

Allows positive identification of in-custody inmate by displaying pertinent data and mugshot of inmate selected (Interface with customer inmate management system required). Information is displayed by selecting the inmate from a list of inmates within scope of control of device or by scanning an inmate's wristband or ID badge.

**Inmate Information**

**Inmate Name:** Barber, James  
**CHN:** 10079  
**Booking Number:** 990017276  
**Housing Unit:** DAYROOM A

**Charges:** OPERATE MOTOR VEH WITH .08 OF 1% ALCOHOL OR MORE IN BLOOD- 1ST OFFENSE

## SHIFT LOG ENTRY

Allows entry of data into Black Creek's computerized, facility shift log. Shift Log entries consist of two elements: Events (i.e. Sent To Programs, Fed Meals, Fight On Unit, etc.) and Inmate Names, if associated with the event. Standardized Event Entries can be selected from a pre-programmed pulldown list, scanned from a printed list of barcoded entries or typed in freeform using the integral keyboard. In-custody inmate names can be scanned from inmate wristbands, ID badges, or selected from a pull-down list. Additional notes or ad hoc entries can be made using the integral QWERTY keyboard.

## WATCH TOUR/WELLNESS CHECK RECORDING

Documents and records watch tours by scanning NFC tags installed at predetermined locations throughout the facility. Watch tour data includes time entry of tour start and tour complete, detailed time entry of scanned locations and name of officer conducting the tour. Works in conjunction with Black Creek's Watch Tour Builder Application which includes a full suite of watch tour reports.

## INTEGRATED CAMERA

Camera captures videos and images and attaches to shift log or watch tour entries for documentation or investigative purposes. For example, during watch tours, as officers make their rounds they can document inmate status with a photo at each checkpoint. The photos are stored with each checkpoint's log record.

## DAYROOM AND CELL UTILITY CONTROL

Control all utilities locally from a mobile platform with the touch of a button. Whether it's lights, power, tv's, or water, all can be instantly accessed and easily controlled by the PDA.

## DURESS ALARM INITIATION AND ANNUNCIATION

Gives your staff another tool in ensuring their safety in an unpredictable environment. By engaging the duress feature, staff can easily and discreetly notify another control station/s of any emergency situation that may arise.

## PROVEN TECHNOLOGY

Black Creek installed its first wireless control system in a correctional facility in 1992. While the technology has changed greatly, Black Creek remains the leader in security control which includes the use of **PDA's**© in correctional facilities.

The deployment of **PDA's**© in correctional facilities has proven invaluable to staff and provides greater versatility for the officer. It is ideal for the direct supervision dayroom, allowing the officer to interact with the inmates by moving freely throughout the unit in accordance with the direct supervision model, not tethered to the control desk.

## TOTAL FACILITY CONTROL

The **PDA**© is capable of completely replacing the fixed touchscreen control station typically installed in a direct supervision housing unit by providing all required control and communications functions. All functions are performed using the **PDA's**© ability to communicate in real-time through wireless access points connected to a conventional wireless network or to Black Creek's Security Monitoring Local Area Network. The **PDA**© can configure itself to control any given housing unit, eliminating the need for a **PDA**© to be assigned to a particular unit.
